

CLEAN TRUCKIN'- Pictured above is one of ten liquefied petroleum gas (LPG) trucks recently put on the road by Danone Waters of North America, with the help of an \$80,000 grant awarded to the water distributor through the AVAPCD's AB 2766 Program. The 10 LPG trucks replaced 10 diesel-fueled trucks which were previously in active use within the Antelope Valley. The 10 clean-fuel trucks are expected to reduce at least seven tons of NOx over a five year period, as compared to replacement with new diesel trucks. Danone's clean air efforts were recently recognized by the AVAPCD via the presentation of an AIRE award to the local distributor.
